Double-Take® Software Enhances its Windows Server 2008 Hyper-V Offerings

*New version also includes enhancements for application management
and hierarchical storage management*

SOUTHBOROUGH, Mass. – March 19, 2009 – [Double-Take® Software](#) (NASDAQ: DBTK), a leading provider of workload optimization software, today announced the availability of the latest version of its flagship Double-Take® for Windows product and enhancements to other products in the company’s suite including complete platform support for Microsoft Windows Server 2008 and Microsoft Hyper-V Server 2008. Double-Take for Windows solves IT managers’ workload portability and availability challenges by making it easy to migrate physical workloads into virtual machines with minimal user downtime and to protect the uptime of critical workloads on physical and virtual machines by using real-time replication and failover.

“We look forward to utilizing the workload portability features in this new version of Double-Take for P2V migrations. After we migrate the workloads, we will continue to protect them with Double-Take for Hyper-V,” said Matthew Woodings, CTO of HotSchedules, the premier provider of web-based restaurant labor management solutions. “We currently use Double-Take for Hyper-V on many of our virtual servers, because it is cost effective and provides us with the greatest flexibility to use our existing infrastructure, rather than requiring specific hardware solutions as some other virtualization vendors do.”

“Customers are rapidly deploying Windows Server 2008 Hyper-V and System Center management tools to drive down costs, increase IT efficiency and enable business agility,” said David Greschler, director of virtualization strategy at Microsoft Corp. “The Double-Take for Hyper-V solution helps customers keep their virtualized workloads highly available. Our collaboration allows mutual customers to have access to cost-effective solutions that can help them manage their physical and virtualized IT infrastructure.”

Overview of the key enhancements to the Double-Take Software product suite:

- Deeper support for the Windows Server 2008 operating system in Livewire, Cargo, and Double-Take for Windows including its Application Manager and full-server protection features.

- **Broader Capabilities for Microsoft Hyper-V Server 2008:** In addition to its Double-Take for Hyper-V product, the company now offers a new version of the Double-Take for Windows Virtual Recovery Assistant. This new version enables migration of physical servers to Hyper-V virtual machines, reduces P2V migration downtime, and allows for migration between geographical locations in support of datacenter consolidations and moves. The Virtual Recovery Assistant can also be used to automate the protection of a workload running on a physical server with a virtualized workload at a disaster recovery site.
- **Double-Take Application Manager feature:** New functionality includes enhancements to support for clustered SQL servers and full support for SQL Server 2008.
- **Double-Take Cargo:** In addition to now supporting Windows Server 2008, the latest version of Double-Take Cargo includes new support clustered file servers, enabling IT administrators to archive file-based data and optimize storage in both standalone and clustered server configurations.

“The latest version of Double-Take is an ideal solution for IT administrators looking to protect their Windows Server 2008-based workloads,” said Bob Roudebush, director of solutions engineering at Double-Take Software. “IT managers using Windows Server 2008 now have the ability to use Double-Take for Windows or Livewire to fully protect their workloads and deliver unmatched continuous data replication, application availability and system state protection in both physical and virtual workload environments.”

Double-Take Software provides customers with affordable, easy to use software solutions that migrate, back-up, protect and flexibly run workloads in both physical and virtual environments. To learn more about Double-Take for Hyper-V, a video webinar is available for immediate viewing (www.accelacomm.com/jaw/pr/0/50229994/). The webinar shows IT managers how the product provides real-time protection and availability for workloads running on Windows Server 2008 Hyper-V, while also providing powerful cost savings.
